

TAMPER-PROOF KEY RINGS®

THE INDUSTRY STANDARD AMONG SECURITY PROFESSIONALS.

No weak and bulky plastic joints with our Tamper-Proof Key Rings®.

Manufactured with the strictest tolerances to provide you with the ultimate in strength and durability, our popular Tamper-Proof Key Rings® provide an added layer of protection for your most valuable assets – from keys and utility knives to medical equipment and cash tills. That's because these high-security, stainless steel rings cannot be opened without detection, making asset substitution impossible.

Unique ID

Each ring has its own unique serial number. This string of numbers and letters enables audits on both the rings and their keys. The permanent ID prevents someone from removing or substituting keys without detection.

Solid or Flexible

Tamper-Proof Key Rings™ are available in solid and flexible (braided) versions.

The Closing Tool

Closes any size ring in preparation for crimping.

The Crimping Tool

Squeezes the connection where the two ends meet creating a permanent seal.

The Cutting Tool

Used to cut open a Tamper-Proof Key Ring™ once it's been sealed.

Color Coded Control

The only plastic we use with our Tamper-Proof Key Rings™ is the color coded tags. They come in five different colors to help separate your keys by function, area and user.

Key Shield

Covering important key cuts prevents duplication.

Closer

The closing tool is designed to accommodate all five sizes of solid rings. Once the ring is fit into the appropriate size slot, the closer arm is swung backwards - forcing ring to close.

Crimper

Once the ring is secured in the Closing Tool, the Crimping Tool is used to form a seal between the two open ends.

Cutter

Should you find it necessary to remove your assets contained on your Tamper-Proof Key Ring®, we provide a cutting tool. This tool creates a visible break in the seal of the ring that cannot be repaired.
